1. Latar Belakang

Seiring dengan perkembangan teknologi dan kebutuhan bisnis yang semakin flexible, sehingga membutuhkan perubahan dengan mudah, cepat dan tepat. Saat ini PBK melakukan penyesuaian dan pengembangan sistem termasuk sistem API atau service yang saat ini digunakan oleh member PBK.

Adapun list API service yang akan dikembangkan dibagi menjadi 2 kategori :

1. Service Old Report
2. Service New Report

2. API Service

Adapun list API service yang akan dikembangkan dibagi menjadi 2 kategori :

1. Service Old Report
2. Service New Report

2.1. Old Report

API Service - Old Report, yang dikembangkan oleh PBK dirancang semirip mungkin dengan service yang saat ini berjalan (**versi 5.109**). Yang membedakan antara service Old Report dengan service yang saat ini berjalan adalah :

- **Domain**
- **XML Namespace**

2.2. New Report

API Service - New Report, yang dikembangkan oleh PBK dirancang sesuai teknologi terkini yang dapat memenuhi kebutuhan bisnis yang lebih flexible. API Service ini berbeda dengan API Service yang saat ini berjalan baik dari sisi alur proses maupun variable parameter input dan response outputnya.

Berikut gambaran alur proses API Service - New Report :

Keunggulan dari New Report adalah :

- Referensi value sesuai standar value output dari OJK.

- Response service berbentuk JSON yang lebih ringan dan ukurannya lebih kecil dibandingkan dengan XML.
- Member dapat mengakses berbagai macam produk dalam satu platform aplikasi.

Berikut daftar service/fungsi dari API Service – New Report :

No.	Fungsi	Method
1.	Pengiriman data username dan password oleh Member System untuk mendapat token sebagai izin akses.	/getToken
2.	Pengiriman data token untuk mendapatkan informasi validitas token dan expired date token	/validateToken
3.	Fungsi untuk melakukan request data debitur berdasarkan jenis produk yang dipilih	/search
4.	Fungsi untuk menginisiasi proses pembuatan report tentang debitur dengan memberikan event_id(UUID) yang disiapkan mitra untuk digunakan saat /getReport	/generateReport
5.	Fungsi untuk mendapatkan report tentang debitur berdasarkan event_id(UUID) yang telah dikirim atau dikembalikan pada saat respon method /generateReport , respon object json untuk report dapat diperoleh sebagai bagian dari respon /getReport ketika code 01 atau sukses	/getReport
6	Fungsi ini digunakan untuk mendapatkan report ketika method /getReport meresponse dengan code 36 atau laporan yang diminta tergolong sebagai <i>big report</i> sehingga respon report berupa object json report file harus di <i>download</i>	/downloadReport

7	Tergantung dari opsi generate Pdf saat generate report, jika ya method ini dapat digunakan untuk mendapatkan report dalam bentuk pdf	/downloadPdfReport
